## 2. Install

SWYatz is a Superwaba program (Java) for PalmOs (mini 2.0).

To work SWYatz needs a Superwaba Virtual Machine. Superwaba version **must be** 3.3.

If Superwaba is not installed on your PDA, you must install it. The 3 necessary files are located in repertory SWVM of this archive.

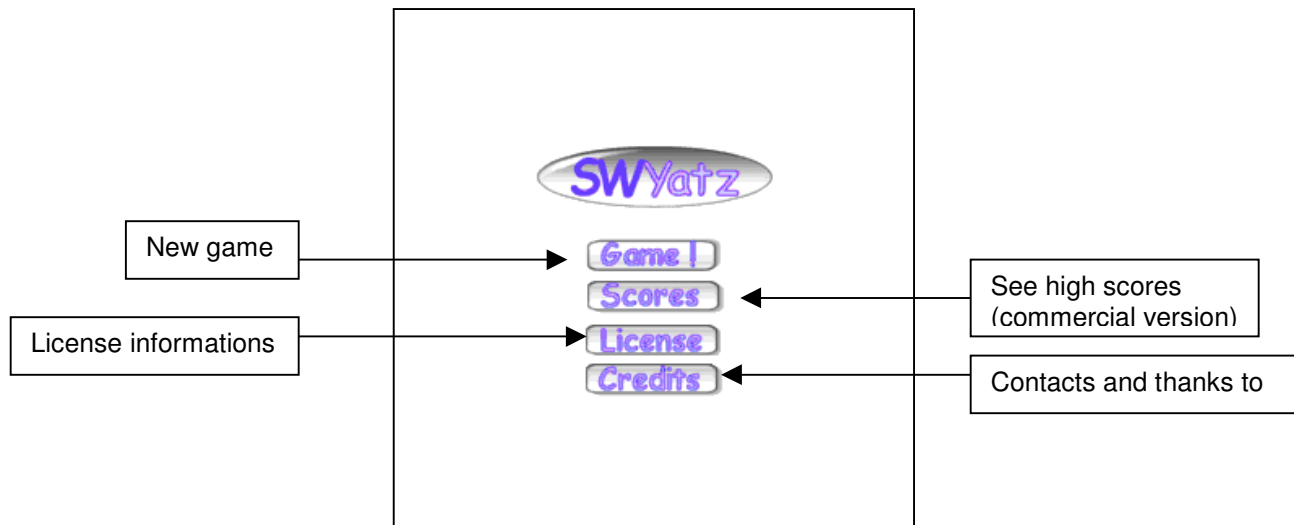

For PalmOs, install the 4 necessary files present in SWVM/PalmOS5 repository of the archive. For others PalmOS, install files present int SWVM folder of the archive.

Once to be assured for you that Superwaba was well installed on your PDA, you can install the files: SWYatz.pdb and SWYatz.prc.

Following the color number of your PDA, you'll install files present in en\_color or en\_grayscale folder. Color version is for PDA with 256 colors and more, grayscale for grayscale PDA. The folders which begin by fr are SWYatz french version.

BE CAREFULL ! Don't install a grayscale version on PalmOS 5 !

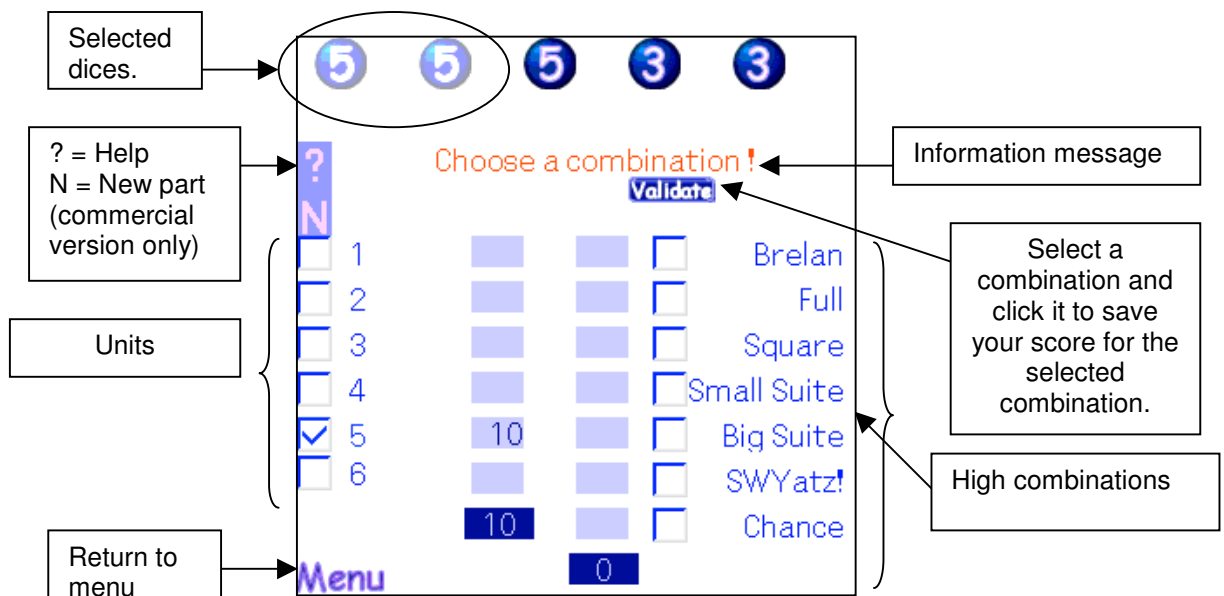

### 3. Using

When you launch the game, and if no part is beginning before, you'll see this screen. To begin a new part, touch the « Game ! » button. If a part was launched, you retrieve the old part with your points, rolls....

The goal of the play is to carry out a maximum of points in only one part, thanks to the realization of combinations.

You are entitled to three launched by blow. To keep dice which you do not wish to start again, click on the dice.

Possible combination :

Combination name	Definitions	Points
------------------	-------------	--------

Units (1 to 6)	One die which value	Sum of dice of the selected combination
Brelan	3 identicals dice and 2 differents	Sum of displayed dice
Full	3 identicals and 2 others identicals	25 points
Square	4 identicals dice	Sum of displayed dice
Small Suite	4 consecutives dice	30 points
Big suite	5 consecutives dice	40 points
SWYatz	5 identicals dice	50 points
Chance	None	Sum of displayed dice

Bonus 35 points : when the sum of the results of the units is higher or equal to 63

Super Bonus Yatz 100 points : as of second successful SWYatz

The part is finished when the whole of the combination was validated.

If your score can enter in the table of the best scores (High Score), a message will indicate it to you and you will be able to indicate your name to it

Find this help and combinations to tape on « ? » symbol (commercial version only).

To begin a new part tape on « N » symbol.

#### 4. A problem?

You encounter a problem during the use of SWYatz? The program does not work correctly (bug)? Any suggestions?

Do not hesitate with me to let it know!

afr@superwaba-France.com

#### 5 : History

v2.1

- PalmOS 5 support
- Roll optimizations, less identicals dice :-)

v2.0

- Graphical interface
- Save 10 highscores instead of 5
- Keep the session

v1.02:

- English version
- Change display for the help menu and combination (faster and better)

v1.01 :

- add on line help and possible combination
- Fix bug to quit SWYatz

v1.0
